

Test: *Corynebacterium pseudotuberculosis* - Caprine/Ovine (SHI)

Animals::Specimens	Collection Date	Result
Carter :: Serum	01/07/2020	Negative
Xavier :: Serum	01/07/2020	Negative
Justice :: Serum	01/07/2020	Negative
Ayala :: Serum	01/07/2020	Negative
Antares :: Serum	01/07/2020	Negative
Arby :: Serum	01/07/2020	Negative
Lambert :: Serum	01/07/2020	Negative
Elation :: Serum	01/07/2020	Negative
Sid :: Serum	01/07/2020	Negative
Harbinger :: Serum	01/07/2020	Negative
Aston :: Serum	01/07/2020	Negative
Willow :: Serum	01/07/2020	Negative
Andromeda :: Serum	01/07/2020	Negative
Beauty :: Serum	01/07/2020	Negative
Patience :: Serum	01/07/2020	Negative
Faerie :: Serum	01/07/2020	Negative
Polaris :: Serum	01/07/2020	Negative
JB :: Serum	01/07/2020	Negative
Lady :: Serum	01/07/2020	Negative
Blythe :: Serum	01/07/2020	Negative
Niagra :: Serum	01/07/2020	Negative
Inheritance :: Serum	01/07/2020	Negative
Katarina :: Serum	01/07/2020	Negative
Noelle :: Serum	01/07/2020	Negative
Rapids :: Serum	01/07/2020	Negative
Anemone :: Serum	01/07/2020	Negative
Eressea :: Serum	01/07/2020	Negative
Eudril :: Serum	01/07/2020	Negative

For goats and sheep, the routine dilution series for the *Corynebacterium pseudotuberculosis* SHI test is 1:4 through 1:64. Positive samples with titers listed as 64 are actually $\geq$ 64.
